

...and reassured
that there is help
at the touch
of a button.

What does the Technology Enabled Care Service offer?

A pendant you can wear. If you fall or are in difficulty, press the button on the pendant which will connect you to staff at our monitoring centre who can talk to you and get the help you need.

Sensors to fit around your home, which will raise an alarm at the monitoring centre if there is a problem.

There are also sensors to check that you or your loved ones are safe.

Carbon Monoxide sensors for if there is a gas leak

Bed sensors check if you have unexpectedly got out of bed and not returned

Fall sensors automatically raise an alarm if you fall

Smoke detectors for if there is a fire

Chair sensors check if you have stayed in your chair at night

Temperature sensors for if your home gets too hot, or too cold

Door sensors sense if an outside door has been opened unexpectedly – e.g. at night

Flood detectors for if a bath or sink overflows

Mobile and location solutions for if you want to get out and about

Working with

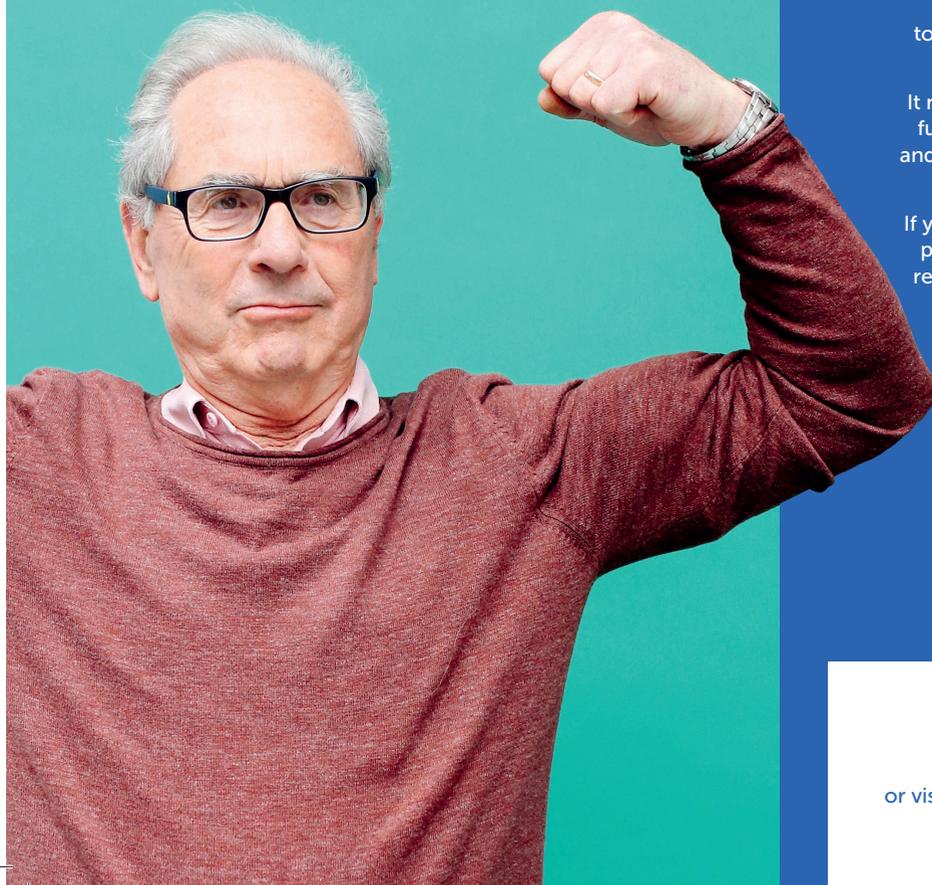

Home is where I want to stay...

How can Technology
Enabled Care help you
and your loved ones?

Safe
Comfortable
Independent
Confident...

How can Technology Enabled Care help me?

By providing peace of mind, reassurance and greater independence.

During difficult times it can feel like your independence is being taken away, however Technology Enabled Care (TEC) can bring it back for you, whether that's giving you greater confidence in your own home and garden or providing that little extra support if you want to go out.

TEC will allow you to live more independently in your own home for longer. It will give you and your family or carer that little extra peace of mind, knowing that someone is available for you 24 hours a day, 7 days a week, 365 days of the year.

There are products to suit all needs, all situations. We can provide free advice from specialist advisors to help you find the right combination of equipment, so you can maintain the lifestyle you want.

It may be that you are eligible for a short or long term funded service through West Sussex County Council and the NHS - if you think this may be the case, please speak to your health and social care professional.

If you are not eligible for funding, NRS Healthcare can provide the full range of equipment, monitoring and responder services for a reasonable weekly payment.

You can choose from a range of options which will alert the monitoring centre...

- If you've had a fall
- If you haven't returned to your bed or chair
- If you've gone out and left the door open
 - And will help if you want to go out in the garden or get out and about.

We'll come and fit your products for you at a convenient time. We'll make sure you're happy and confident about using them before we leave. You can always call us if you have any more questions.

How can Technology Enabled Care help my loved ones?

TEC provides peace of mind, reassurance and increased confidence that someone is there for your loved one at the touch of a button.

Caring for a loved one can be difficult, especially if they want greater independence but you're worried about them living on their own.

TEC can help both of you – it gives your loved one the benefits of being able to contact someone immediately but without feeling their independence is being taken away. And it offers reassurance to you that there is help at hand should anything happen.

Our monitoring centre is available 24 hours a day, so your loved one can call for help or reassurance at any time. We also offer a responder service, so if you live far away or aren't always on hand, you know someone will be there for your loved-one.

With the additional peace of mind provided by TEC for you and your loved one, you can spend better quality time together and have more time to enjoy the things they like to do.

You can choose from a range of options which will alert the monitoring centre...

- If your loved one has had a fall
- If your loved one hasn't returned to their bed or chair
- If your loved one has gone out and left the door open
- And will help if your loved one wants to go out in the garden or get out and about.

We'll fit their products at a convenient time. We'll make sure you're both happy and confident about using them before we leave. You can always call us if you have any more questions.
